

## Пресс-релиз

Иностранные медиа и онлайн-издания сообщают об открытиях ученых Института биологии моря им. А.В. Жирмунского ДВО РАН:

### **The secrets of Russia's Sea of Okhotsk – nearly 500 species discovered**

**November 30, 2015**

In the summer of 2015 almost 500 previously unknown ocean species were discovered in the Kuril Basin that is part of the Sea of Okhotsk in the northwestern Pacific Ocean. Scientists from Russia, Germany, Japan, Spain, and other countries took part in the SokhoBio expedition that made these sensational discoveries. In an exclusive, RBTH reports the preliminary results.
